

## Overhead Crane Drum Cage Attachment.

The Heavy-Duty Drum Cage attachment for overhead cranes is designed to lift most types of steel or plastic drums from 350kg (771lbs) up to a maximum capacity of 750kg (1653lbs).

The 'Grab-O-Matic' Drum Cage has a solid steel base with a hinged plate, and a webbing and ratchet clamping system. This secures the drum against the rear profile of the frame. The hinged gates open at the front to allow the drums to be loaded. The gates are secured with locking pins.

The cage is suitable for all types of 205/210L drums and is designed to be attached to an overhead crane.

A single point lifting eye is used to lift the cage and can be attached to the hook of an overhead crane hoist.

The unit is finished in hard wearing blue gloss powder coating.
