

### Stainless Bobbin Lifter Attachment

This bespoke stainless 'Compac' lifting equipment with a Bobbin Lifting Attachment was originally designed to handle bobbins of copper wire. However, the bobbin attachment is suitable for a wide range of loads including textiles, film, foil, cable etc.

The bobbin attachment features a manual handwheel with expanding arms or paddles which securely grip and hold the bobbin in place whilst being handled.

The expanding attachment arms are lowered onto the bobbin where the tool head or handwheel can be rotated to lock the bobbin into place.

The raising and lowering actions of the bobbin attachment are made by a battery powered mechanism which is operated by simple 'up and down' buttons that are located ergonomically on the machine's handlebars. Ease of operation is further enhanced with a slow start feature that provides the operator with precise and accurate positioning when docking, loading and un-loading.

This lifter is entirely suitable for high care, clean room environments. The design offers impressive stability, strength, and durability and together these features combine to provide the transportation of the cylinders with ease, confidence and complete safety.

The attachment is backed up by a full bespoke design service ensuring the right solution can be made to suit most applications and requirements.

All Packline attachments are fully interchangeable and can be easily fixed or removed from any model of 'Compac' lifting machine that is fitted with the quick release system.

#### Specifications:

Lift capacity: 250kg (551lbs)
