

Logitilt Hospital Bed Lifter

The 'Logitilt' Hospital Bed Lifter has been designed to provide the safe and easy lifting and tilting of hospital beds.

The machine provides full access to the bed underside and enables the maintenance and repair of all components as well as thorough cleaning and wheel replacement, etc.

The beds are fully supported by the lifting forks and backplate. The bed is secured by a pair of quick action, adjustable clamps (included).

The ergonomic design with pendant style remote control for the tilt feature enables the operator to lift, tilt and transport hospital beds with complete confidence and safety.

The 'Logitilt' Hospital Bed Lifter is both compact and highly manoeuvrable and can be used in lifts and other confined spaces.

The machine is backed up by a full bespoke design service so ensuring that the right solution can be made to suit most requirements.

The stainless-steel construction option makes the lifter entirely suitable for the food and pharmaceutical industries and other hygienic applications.
