

Vertical Spindle for Overhead Systems

This version of the Vertical Spindle allows operators to simply lift and lower reels of material safely and efficiently. Either using an existing overhead system or if you are installing a new overhead system this new attachment will solve your lifting and handling needs.

The Spindle simply attaches to a winch hook and hangs vertically until needed.

The hand wheel is turned to expand or contract the fingers which grip securely the core of a reel. The spindle has an internal torque unit which has a slip clutch mechanism. This ensures that the correct grip is achieved to ensure a consistently safe lift.

The spindle is suitable for either 152mm/6" or 76mm/3" cores as standard however other sizes can be catered for if required.

Please do not hesitate to contact Packline for further information regarding this design on 01202 307700 or via our web site at www.packline.co.uk

Technical Specification

Maximum Capacity = 200kg

Core Sizes = 6" or 3" as standard

Attachment Mass = 15kg or 12kg
