

Barrel Lifting Attachment

The Barrel Lifting attachment has been designed to provide the safe and easy lifting and controlled movement of barrels.

The barrel is securely retained by a lug and cantilever arrangement which locates into the rim and supports the end of the barrel. This feature provides a swift and easy docking that provides safe, reliable transportation.

The Compac Lifting Machine raises and lowers the barrel by powered drive and this is operated by simple up and down buttons which are located ergonomically on the machines handle bars.

The design offers strength and durability with ease of operating and is entirely suitable for the beverages and food industries and other hygienic applications as the solution is manufactured in stainless steel.

The attachment is backed up by a full bespoke design service ensuring the right solution can be made to suit any make or size of barrel.

All Packline attachments are fully interchangeable and can be easily fixed or removed from any model of Compac lifting machine that is fitted with the quick release system.

Technical Specification

Attachment Lift Capacity:	60kg (maximum) load.
Centre of Gravity:	291mm (from column).
Attachment Mass:	13kg.
Main Materials:	Stainless Steel 304.
