

Glass Lifting Harness

The Glass Lifting Harness makes moving large panes of glass easy and quick, whilst being safe at all times.

The Glass Lifting Harness caters for tradesmen carrying glass manually, but it allows one person to carry the glass, whereas usually this would be a two person job.

This is a harness that is designed to support up to 50kg and allows the operator to transport the glass without the need to hold the weight of the glass while walking.

Both the straps and also the glass support are fully adjustable to cater for all persons. Optional padded shoulder supports are also available.

Please do not hesitate to contact Packline for further information regarding this design e-mail us at info@packline.co.uk or via our website at www.packline.co.uk
