

## Keg Lifting Attachment – Vertical Lift

This Keg Lifting Attachment has been designed to provide the safe and easy lifting and controlled movement of kegs and barrels.

The keg or barrel is securely retained by means of a 'hook' attachment which locates unit the rim or keg handle 'cut out' to secure and lift the keg vertically. Therefore, the lifting equipment carries the full weight of the keg, providing a swift and easy docking that provides safe, reliable transportation.

The Lifting Machine raises and lowers the keg or barrel by means of a toggle lever system, at a rate of 10 seconds per metre.

The design offers impressive strength and durability with ease of operating and is suitable for warehouses, pub cellars and wine distilleries.

The attachment is backed up by a full bespoke design service ensuring the right solution can be made to suit any make or size of barrel.

This keg lifter has a lifting capacity of up to 60kg, although higher capacities are available depending on the model.

This model is a mild steel painted finish - Stainless Steel models are also available on request.

### Specifications:

- SWL: 60kg
- Lift Heights: 1200, 1500, 1700mm
- Lift via Hydraulic Ram
- Manual Propulsion
- Mild Steel Painted
- 12V DC Battery
- Internal Battery Charger
- 240v Charging
- Fixed Control Buttons
- Fixed Pallet Wheels at Front, Swivels Castors at Rear.
