

Drum Clamp Attachment – High Care Environment

Vertical Drum Lifting Clamp with Powder Coating suitable for Pharmaceutical Industry.

This lifting solution was designed in response to a customer requirement to lift drums of chemicals to and from a weighing scale.

The Clamp Attachment has been specifically designed to handle drums and similar vessels by providing powered vertical lifting and lowering only (i.e. no rotation of the drum).

The drum clamp arms have a powdered coating with a blue plastic coating to prevent contamination of the ingredients or chemical contents of the drums being lifted.

The clamping mechanism is fitted with a torque limiter so that the gripping pads do not over or under tighten on the external diameter of the drum.

These features enable the operator to lift, transport and handle the drums with complete confidence and safety.

The attachment is backed up by a full bespoke design service so ensuring that the right solution can be made to suit most lifting requirements.

All Packline attachments are fully interchangeable and can be easily fitted or removed from any model of Compac lifting machine that is fitted with the attachment quick release system

This lifting equipment has a maximum capacity of 225kg (496lbs); however larger capacities, and to suit other types and styles of reels with their materials, may be available on request.
