

Reel Handling – Powered Drive

The Powered Drive 'Compac' Lifter has been designed to provide precision manoeuvrability of the Roll Lifting Machine with both forward and reverse drive. The powered drive capability enables the operator to easily transport and move the lifting truck without any effort required.

The Powered Drive Unit is interchangeable and can be fitted or removed from most models of the Packline 'Compac' lifting machine, as required.

The powered drive 'Compac' is preferred over the manual propulsion model when the items being lifted need to be transported over greater distances or if there is a requirement is to completely remove any operator manual effort.

This lifting solution is suitable for clean room and high care environments, such as pharmaceutical and food processing.

The powered drive 'Compac' can be fitted with any attachment from the Packline range, or bespoke attachments if required. The model shown is fitted with a Vertical Spindle attachment to suit the lifting and rotation of reels of film or foil which have a core diameter of 152mm (6") or 76mm (3").

The Vertical Spindle Attachment is fully motorised. This feature provides power for both the reel gripping and release as well as the reel rotation to and from the vertical to horizontal orientations.

There is the option for a wide leg configuration to straddle around the pallet. The wider legs also enable the reels to be easily lowered to the floor.

The equipment is backed up by a full bespoke design service so ensuring that the right solution can be made to suit most reels.

All Packline attachments are fully interchangeable and can be easily fitted or removed from any model of 'Compac' that is fitted with the quick release system.

Features and Specifications:

- Powered Drive and Electric Lift.
- Lifting Capacity – 225kg (496lbs).
- Reel core diameter – 152mm (6") or 76mm (3")
- Option: Straddle Legs.
- Construction - Stainless Steel 304.
- Quick and easy removal and replacement for cleaning and servicing.
- Low maintenance.
- Easy and safe ergonomic handling by a single operator.
- Full and precise manoeuvrability for ease of operation with minimal effort.
- Suitable for high risk and hygienic applications.
- Retro-fitting to existing Packline 'Compac' machines, subject to a survey.
