

Drum Handling Clamp – Manual Clamping and Geared Rotation

The Geared Clamp attachment has been designed to suit the lifting and rotation of drums.

The attachment has two handwheels, the first provides the easy grip and release action of the drums which are secured by the external diameter. The mechanism is fitted with a torque limiter so that the gripping pads do not over or under tighten onto the drum. This feature enables the operator to lift and transport drums with complete confidence.

The second handwheel is for the geared drum rotation to and from any angle between the vertical to horizontal orientations which assist the operator when filling and emptying the drum.

The combination of these handwheels provides easy operation and precise control.

This lifting solution is suitable for the food industry and other hygienic applications and features FDA approved nitrile rubber pads.

The attachment is backed up by a full bespoke design service so ensuring that the right solution can be made to suit most drums.

All Packline attachments are fully interchangeable and can be easily fitted or removed from any model of Compac lifting machine that is fitted with the quick release system.

Lifting capacity of up to 200kg depending upon model.
