

‘Hedgehog’ Multi Reel Dolly – Solid Single Spindles with Rollers

The ‘Hedgehog’ Multi Reel Dolly Portable Trolley, with transfer rollers, is designed to store and easily transfer several rolls up to a maximum weight of 640kgs.

The Multi Reel Dolly incorporates eight single spindles with rollers to easily transport or store up to eight rolls with a lift capacity of 80kg.

Constructed from stainless steel the Multi ‘Hedgehog’ Dolly is suitable for high care clean room environments.

The reels can be easily loaded and unloaded from the reel dolly by means of the Packline ‘Compac’ lifting machine with single spindle attachment and transfer rollers.

The solid single spindles are equipped with transfer rollers to assist the operator to transfer the rolls from and onto the lifting machine attachment and reel dolly. This reduces the requirement for operator manual handling.

The Multi Reel Dolly is a convenient and hygienic storage resource for the reels, and a cleaner alternative to the reels being stored on the floor or pallets.

Manufactured from Stainless Steel 304 the ‘Hedgehog’ Reel Dolly is designed with hygiene in mind with easy wipe down surfaces.

The bespoke ‘Hedgehog’ Multi Reel Dolly can be made to order to suit most reel diameters, widths, and weights. The reel dolly is backed up by a full bespoke design service so ensuring that the right solution can be made to suit most storage and transfer requirements.

Brakes and swivel castors provide full manoeuvrability in tight spaces. When the brakes are applied the Dolly can be used as a storage facility until such time that the reels are required.
