HD Roll Handling – Motorised Vertical Spindle Attachment

The Vertical Spindle attachment has been designed to suit the lifting and rotation of reels of film, foil, paper and various packaging materials which have a core diameter of 6” or 3”.

The Vertical Spindle Attachment is fully motorised. This feature provides power for both the reel gripping and release, as well as the reel rotation to and from the vertical to horizontal orientations. The control of these motors is made via a hand-held ‘pendant’ control which provides easy operation and precise control.

The reels are securely gripped by the core. This mechanism has a torque limiter fitted so that the clamping fingers do not over or under tighten in the core. This enables the operator to lift and transport reels with complete confidence and safety.

The Vertical Spindle has been mounted onto a heavy-duty mild steel painted Stacker Truck.

The optional feature of straddle legs is available to enable the stacker truck to easily fit around the pallet to access the reels.

The equipment is backed up by a full bespoke design service so ensuring that the right solution can be made to suit most reels.

All Packline attachments are fully interchangeable and can be easily fitted or removed from any model of stacker truck that is fitted with the quick release system.

Specifications and Options:

- Reel core diameters – 152mm (6”) or 76mm (3”).
- Stacker - Available with Straddle Legs.
- Lifting Capacity – 250kg (551lbs).
- Construction: mild steel painted stacker with stainless attachment (Stainless Steel model available on request).
- Electric Lift and powered drive (manual lift with manual pump-up option).
