

High Shear Mixer Head Lifting Solution – Safe, Reliable, and Hygienic Handling

The High Shear Mixer Head Lifting Attachment provides a safe and efficient solution for handling various mixer heads, designed specifically for clean room environments where hygiene and chemical resistance are critical.

This attachment, used in conjunction with the Compac lifting machine, enables the easy lifting and lowering of mixer head assemblies into and out of mixing vessels, ensuring smooth and precise operations. Constructed from stainless steel and built to an IP65 rating, it is easy to clean and resistant to chemicals, making it ideal for applications where hygiene is paramount.

For increased accessibility to large diameter mixing vessels, the High Shear Mixer Head Lifter is available with an optional wide leg span.

Packline's High Shear Mixer Head Lifter is designed to meet the latest Health and Safety directives, incorporating key safety features such as:

- Electrical overload trip to prevent damage
- Emergency stop button for immediate control
- Lift and lower travel limit switches for safe operation

With three different attachments available as standard, the lifter supports loads of up to 110kg as standard, covering a wide range of High Shear Mixing Heads. For special applications, Packline offers a full bespoke design service to tailor solutions to your specific needs.
