

Mixing Bowl Lifting and Tipping Attachment – Tailored for Food Ingredient Handling

Packline's **Mixing Bowl Lifting and Tipping Attachment** is specifically designed to handle a wide variety of mixing bowls, including the popular Hobart Mixing Bowls. This bespoke lifting solution can be customised to suit most mixing bowl handling requirements, ensuring safe and efficient operations.

The attachment allows for the safe lifting, tipping, and lowering of mixing bowls, **offering manual, gearbox-assisted, or fully motorised tipping** options. The forward tipping mechanism enables controlled and efficient emptying of ingredients, eliminating the need for manual handling.

The mixing bowl is securely retained by the lifting attachment using a clamping mechanism or two slide-in locators and is firmly held in place with a unique quick-release system. The lifter is easily operated using a remote control, ensuring both safety and ease of use.

Manufactured from stainless steel, this attachment is ideal for the food industry and other clean-room or hygienic environments, meeting high standards for food safety.

Packline offers a **full bespoke design service** to ensure the lifting solution is perfectly suited to your specific mixing bowl sizes and operational needs.
