

Clamp Attachment - 360° Rotation (Manual, Geared, or Motorised)

The Clamp Attachment offers a flexible and secure solution for lifting and rotating reels via their outer diameter, with full 360° rotation for precise positioning. Available in manual, geared, or motorised models, it meets a wide range of handling needs across various industries.

Rotating nitrile rubber rollers ensure a strong grip and accurate alignment, while a slip torque mechanism (or electronic torque control on motorised versions) prevents over-tightening and reel damage.

Fully compatible with all Packline Compac lifters via the quick-release system, this attachment combines safety, control, and ease of use.

KEY FEATURES:

- ✓ Grips reels by outer diameter
- ✓ 360° rotation – manual, geared, or motorised
- ✓ Nitrile rollers for secure grip and alignment
- ✓ Slip torque or electronic torque control
- ✓ Quick-release compatibility with all Compac models
- ✓ Safe, damage-free handling for sensitive applications
