

Heavy Duty Rotating Tray

Packline's Rotating Tray attachment has been well used and proven for lifting reels up to height, rotating them and loading them onto machinery for example.

The Heavy Duty Rotating Tray works on exactly the same principle as the standard Rotating Tray, only it is capable of lifting heavier reels and rotating them into place.

At the higher end of the reels being lifted, a higher rated lifter is required.

The Stainless Steel, Aluminium and Delrin construction of the Rotating Tray ensures structural stability and the ability to lift the heavier reels and can be safely used in food and pharmaceutical production environments.
