Vacuum Lifting Systems for Barrels & Kegs

Effortless, Hygienic Handling in Warehousing and Processing Environments
Packline's vacuum lifters for barrels and kegs provide a safe, efficient solution for lifting and transporting heavy cylindrical loads. Ideal for use in cleanrooms, warehouses, and processing facilities, these systems streamline the movement of barrels and kegs from pallets to storage, production lines, or transport vehicles.

Designed for flexibility and ease of use, the vacuum lifter enables smooth, weightless handling with a standard lift capacity of up to 100kg.

KEY FEATURES:

- ✔ Safe, ergonomic handling of barrels, kegs, and similar containers
- ✔ Suitable for both cleanroom and industrial environments
- ✔ Customisable design: lift capacity, reach, and material (e.g. stainless steel)
- ✔ Wide range of tool heads and configurations tailored to your process

Improve workplace safety and efficiency with a vacuum lifting solution designed for your specific barrel and keg handling needs.
