

Vacuum Lifting Solutions for Metal Billets

Our vacuum lifters are specifically designed for the safe and efficient handling of metal billets, accommodating all metal types and alloys, with lifting capacities of up to 60kg.

Engineered for flexibility and ease of use, these systems feature interchangeable suction heads tailored to the size and shape of the billet, ensuring secure and precise handling every time.

Each vacuum lifter can be custom-built to match your specific requirements—whether that involves lifting capacity, reach, or construction materials. Available in painted mild steel or stainless steel (304/316), the lifters are suitable for a wide range of industrial environments.

The range of vacuum lifters offer Flexible Mounting Options, including Bolt-down and portable options.
