

Vacuum Lifting Systems for Panels and Sheet Materials

Designed for efficient and ergonomic handling of sheet materials, our vacuum lifting systems provide a safe and reliable solution for warehouse and production environments. Ideal for lifting and transferring materials such as metal sheets, Perspex, plastics, composite panels, worktops, wood and doors, these systems enable smooth movement between pallets, storage areas and workstations while reducing operator strain and improving productivity.

Available with lift capacities of up to 750kg as standard, each solution can be tailored to suit specific operational requirements, including crane configuration, reach, suction head arrangement and material construction. The Spider-Lift 'Spyda-Lift' model features low-voltage battery-powered operation for enhanced flexibility and ease of use.

Manufactured in painted mild steel or stainless steel (304/316), our vacuum lifters are built for long operating life, low maintenance and dependable performance in demanding industrial applications, delivering streamlined handling with enhanced safety and operational efficiency.
