

Vacuum Lifter with Integrated Weigh Scale

Precision Lifting with Real-Time Weight Monitoring

The Vac-Line vacuum lifting system with built-in weigh scale is engineered to enhance material handling efficiency by providing accurate, real-time weight data during lifting operations. Designed for manufacturing, warehousing, packaging and processing environments, this system ensures consistency, improves work flow accuracy, and reduces manual handling errors.

KEY FEATURES:

- ✓ **Integrated Weigh Scale**
Automatically captures the weight of each lifted box for immediate feedback
- ✓ **Pre-Set Weight Function**
Allows operators to define target weights, ensuring uniformity in processing and packaging
- ✓ **Traffic Light Indicator System**
Visual LED indicators on the lifting head display whether the lifted box meets the pre-set weight criteria—green for within range, red for out of range
- ✓ **Optimised for Accuracy and Efficiency**
Ideal for operations where precise weight control is critical, such as order fulfilment, batching, or shipping

The Vac-Line system combines ergonomic lifting with precision weighing, reducing handling time and ensuring product consistency across the supply chain.
