

Cradle Attachment & Storage Trolley for Handling Dies DS13743/112023

The **Stainless Steel Cradle Attachment with Storage Trolley** is a bespoke die handling solution, designed to safely lift, rotate, and transport **tooling dies** while reducing manual handling. Originally developed for the **medical industry**, this system ensures efficient die transfer between the press and storage area in a controlled, hygienic process.

Safe and Efficient Die Handling

The **die cradle attachment** allows dies to glide smoothly into **location slots**, where they are securely locked in place. Once loaded, the attachment rotates the dies into the **vertical position** for precise alignment with the **storage trolley**. The dies then lock into the trolley's corresponding location slots for safe and organised storage.

Key Features

- ✓ **Geared handwheel rotation** for easy, controlled die positioning
- ✓ **Battery-powered lift mechanism** with ergonomic "up and down" controls on the handlebars
- ✓ **Vertical storage system** for space-saving organisation
- ✓ **Stainless steel construction** – ideal for cleanroom and hygienic applications
- ✓ **Bespoke design service** to suit specific die handling requirements

Technical Specification

- ✓ **Lift capacity:** 100kg (220 lbs)

This die handling cradle and trolley system is particularly suited for the **medical sector**, as well as other cleanroom and hygienic environments. Its stainless-steel build ensures durability, ease of cleaning, and compliance with stringent hygiene standards.
